# OMSVISION®

# **OMSVision EHR**

Henry Schein OMSVision was the first oral surgery software to offer a completely embedded, truly electronic health record (EHR) in a core practice management software solution. This industry-defining EHR technology is an exclusive integrated component in OMSVision and enables more efficient, paperless record keeping and streamlined operatory functionality. The OMSVision EHR guides the clinician and staff through a SOAP-formatted record which is easy and intuitive to maintain.

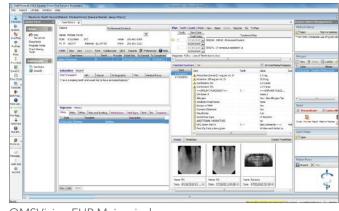

# **OMSVision EHR: A Quick Visual Tour**

OMSVision EHR starts with the Significant Medical History Alerts (top left). Below the Medical Alerts, the area labeled "Cases" organizes and displays all visits for that specific case. Notice you're also able to see the Tooth #, Provider #, Dates, Chief Complaint & Referring Dentist notes. The Objective Findings are entered under the History section. Next, the Assessment section documents your radiographic and oral examination findings. On the upper right section of EHR, you can easily enter the diagnosis and treatment plan. The lowest right area displays the patient photo, and any number of images.

#### With OMSVision EHR, you have the ability to:

- Create meaningful narrative and referral letter templates.
- Store your patient photos and digital images in their health record.
- Enhance your office efficiencies with paperless charts.

## Treatment Summary: Chart Notes and Medications

After an EHR has been created or updated, the treatment summary enables you to quickly and easily complete detailed chart notes and medications that were administered, simply by clicking multiple choice answers.
